

IMS-Bio. More than just managing images

IMS-Bio is a complete redesign of the industry leading ImageAccess and is now adapted to workflows in Life Sciences.

It has many new and enhanced features such as embedded LiveView module in acquisition, linking to PMS (Project Management System) or LIMS (Labour Information Management System) and the Reporting tool in MS PowerPoint or MS Word.

One of the most notable features is IMS Publisher, which is specifically designed to view and download your images and movies without any additional software, simply using a regular browser (e.g. on your laptop, tablet or even your phone).

IMS-Bio runs on all platforms: Win, MacOS, Linux.
