

### **Methods for Testing and Evaluating Cameras**

Photometrics believe that workshops at meetings such as emc/**MICROSCIENCE** should be about giving real users information and a chance to learn rather than just to be sold to. So rather than telling you about our state-of the art products we will tell you how to test and maintain your current cameras.

We will demonstrate how to evaluate new cameras and also how to ensure your current ones, no matter which supplier they are from, are operating within specification. All users will leave with a handbook of short tests to perform, hopefully a smile and possibly a pen with our logo on.

We will also have some of our new products and advancements so please look out for these but again no hard sell.

European Microscopy Congress (emc2012)  
16<sup>th</sup>-21<sup>st</sup> September 2012
